

CASE STUDY ::> TARGET APPLICATION

Waterproofing Decks

THE SITUATION

Decks provide a beautiful and functional addition to many homes. They can also be a critical element in protecting the home from water damage due to leaks. Failed home waterproofing causes tremendous damage that can cost thousands of dollars in damage and repairs.

Material selection is the most crucial aspect of waterproofing. The best application of a poor product will still result in a failed application. Investing in the proper materials and application up front can save the homeowner from tremendous cost and frustration later.

In many parts of the country, LINE-X is the best known waterproof decking solution. Local contractors specify LINE-X by name in their plans and build decks to the proven standards that ensure a complete long lasting solution for the homeowner.

THE SOLUTION

LINE-X has developed a superior waterproofing solution with its LINE-X XS-310 material. It provides the same toughness and elastic qualities which LINE-X spray-on bedliners are nationally recognized.

Applying LINE-X XS-310 forms a single waterproofing membrane barrier. XS-310 is a unique formulation designed to penetrate and seal all of the small cracks that could allow water to seep past lesser materials.

By adding LINE-X XS-310 homeowners can be sure their decks are protected. This LINE-X application will save the homeowner from expensive repair costs down the road.

THE RESULTS

The homeowner was delighted with the job and application. They recognized LINE-X XS-310 as a superior solution when compared to other waterproofing applications.

Only LINE-X combines elasticity and toughness into a single membrane which is impervious to water. They also liked the care that went into the deck before LINE-X was applied. The coving and PVC fascia board gave a professional look to their deck.

The homeowners know they have the best deck and waterproofing design in the neighborhood. This gives them peace of mind both when they are outside enjoying their deck and inside during the rain, watching the LINE-X waterproofing application perform.
